## Product Description

### Product Description

EMERSON 1C31204G01 OVATION REMOTE I/O NODE MODULE

### Technical Application

The MQ Controller provides communication and control between the field devices and the other nodes on the control network. Control strategies and system configurations created on earlier DeltaV™ systems can be used with this powerful controller. The MQ Controller provides all the features and functions of the MD Plus Controller, with the same amount of memory. The control languages executed in the controllers are described in the Configuration Software Suite product data sheet. For each controller you will need to select the mounting carrier. Please refer to the I/O Carrier product data sheet for details. Each controller requires a dedicated system power supply. Please refer to the Power Supplies product data sheet for details. The MQ controller requires v12.3 or later DeltaV software.
